

## **COVID-19 Deaths by Vaccination Status**

Updated: May 24, 2022

This reports aims to show the levels of protection against deaths related to COVID-19 based on vaccination status. This report shows deaths by vaccination status starting August 2021 because additional/booster doses became available starting that time.

|  | Number | Rate (per 100,000) |
|--|--------|--------------------|
| Total Deaths from August 2021 to present | 314    | 116.4              |
| Unvaccinated                             | 210    | 187.4              |
| Fully Vaccinated without Booster         | 83     | 52.6               |
| Fully Vaccinated with Booster            | 21     | 13.3               |

From August 2021 to present there have been 314 deaths. The cumulative incidence rate for the unvaccinated deaths is 187.4 per 100,000 unvaccinated persons, which is **3.8X** greater than the incidence rate of Fully Vaccinated without Booster deaths and **15.0X** greater than the incidence rate of Fully Vaccinated with Booster deaths.

## Unvaccinated people have:

- **3.8X** Risk of Dying from COVID-19 compared to people fully vaccinated (with at least a primary series)
- 15.0X Risk of Dying from COVID-19 compared to people fully vaccinated and boosted
